This document summarizes generic rules for student conduct regarding labs and exams in this course.

This is considered to be part of the course syllabus, and it is official course policy, so you need to read all of it.

Failure to abide by these rules will be considered academic dishonesty and will be dealt with according to university policy.

Exams

Exams are to be your own work, and no consultation with other persons is allowed.

It is never acceptable to copy work from another student.

Labs

Lab writeups that you turn in are to be the work of your lab group.

You may discuss the lab with members of other groups, and you may compare your results with those of other groups.

If you include data or results from other groups for purposes of comparison, you must clearly indicate which data and results are from your group and which data and results are from other groups.

You may not rely on another group to carry out a calculation for you or to produce a plot for you.
