Cruise Ship Tourism

Semester at Sea

Choose your cruise with oceans in mind

100% of waste is stored on ship until docked where waste can be properly disposed of

0 plastic straws, disposable cups, lids, cutlery, or garbage bags (all are swapped with a plant-based biodegradable substitute)

Copper-based antifouling paint with serious toxic effects on marine life

Promotes excessive consumerism and waste production aboard ship and when docked

8,500 plastic bottles disposed of each day

Semester at Sea

Programs to address cruise ships’ solid and liquid waste streams on an international scale are still either ineffective or nonexistent

Semester at Sea

Regulates and prevents pollution due to:

- Oil, Noxious Liquid, Substances in Bulk, Harmful Substances Carried in Packaged Form, Sewage, Garbage, Air Contamination

Semester at Sea

Non-toxic Silicon antifouling paint that reduces drag, and saves fuel

Provides field experiences that allow you to learn hands-on conservation practices from other cultures
