LET’S TALK ABOUT SUNSCREEN

Out with the OLD:
Commercial sunscreens with unknown/harmful effects!

In with the NEW:
A novel sunscreen beneficial to you and the environment!

Sunscreens that contain chemicals such as oxybenzone and/or octinoxate which are harmful to our environment³; These chemicals have unclear side effects as they enter our bloodstream.⁴

This sunscreen will contain biosynthetic compounds (gadusporines)¹ found in nature coupled with calcium carbonate. Combined, these can simultaneously protect you from UV rays, provide your skin with antioxidants, and be beneficial to our oceans.²
